President's Message

It's already April and the time seems to be flying by this year. I know everyone is busy, and that is certainly a good thing for all of us.

In 1984, President Ronald Reagan signed the first Presidential Proclamation recognizing National Surveyors Week. This Proclamation asked citizens to observe this week with appropriate ceremonies and activities to pay tribute to professional surveyors and their contributions to society. This year, we celebrated it the week of March 17th – 23rd. We were grateful to receive the State of Florida Resolution announcing Florida Surveyors &

Mappers Week at the Florida Cabinet meeting on March 12th. Tom Steckler, Don Elder and I attended to represent FSMS, and we enjoyed meeting Governor DeSantis and Commissioner Fried.

I want to congratulate all the chapters who went through the effort to obtain Proclamations from their local cities and counties. If you haven't already, please email those to the administrative office in Tallahassee, so that we have them on record. By the way - did you know there is a Global Surveyors Day? I didn't, but I learned just recently that it was celebrated on March 21st. Who knew?

Don Elder and I attended the 3rd International Congress of Land Surveying, Cadaster, and Geospatial Sciences hosted by the Association of Land Surveyors of Puerto Rico in San Juan on March 15th and 16th. This was a great opportunity to visit Puerto Rico and establish dialogue with a wonderful group of professionals. The group has been led this past year by Agrim. Ruth L. Trujillo Rodriguez, PS and will be led next year by Agrim. Carlos R. Fournier Morales, PS, the incoming President. I was very impressed by both of these young professionals. They are bright, talented individuals who are passionate about Puerto Rico and our profession.

Ms. Trujillo was selected by FIG to participate in their FIG Working Week in Hanoi, Vietnam later this month. Mr. Fournier is very enthusiastic about the future of their association and looks forward to addressing the challenges of working on the island and serving their communities. Mr. Fournier is also licensed in Florida. We have invited both of these professionals to attend our conference in July. If they are able to attend, please take the opportunity to speak with and get to know them. I know you will make them feel welcome as they did for Don and me. We are excited to establish a collaborative partnership with our Puerto Rican colleagues.

If you have not yet joined FSMS, or renewed your membership, please take the time to do that today. All Chapter Presidents should have received an email on March 11th with links to their chapter rosters, which also includes inactive members that have not yet renewed. These links will be maintained and updated in real time for your use. Sometimes, it's the personal touch of a phone call that can encourage and remind our fellow professionals to lend their support to our Society. Speaking of which - our technical staffs should join as Associate members. They have a great deal of valuable input into the issues that we as a Society should be discussing.

For those of you that have renewed or joined FSMS for 2019, you should have received notice of your NSPS membership as well. I would encourage you to visit and login to the NSPS website and review the Benefits of Membership page, as well as print out your membership card.

Our Annual Conference is July 24th - 27th at the Caribe Royale in Orlando. The full schedule and registration will be available soon and you can already make your hotel reservations. The Board of Professional Surveyors and Mappers will be meeting at the Caribe on July 23rd, which means it's another opportunity to observe and participate in our Regulatory Board meeting. See you there!

"Individual commitment to a group effort -- that is what makes a team work, a company work, a society work, a civilization work." – Vince Lombardi

Surveyors IIII in Government Richard Allen, PSM, CFM

We are inching closer to summer and the heat will be here before we know it. I always take this time to remind everyone that we need to be thinking about safety training. This includes heat exhaustion and other areas of safety, so our staff members are trained and ready for what the weather and motorists may bring. I know some of the training is repetitive, but it is beneficial and worth it.

Orlando is very fortunate to have an extensive in-house safety and training staff that make up our Risk Management Division. Not only do they provide safety training, but they also do training assessments and conduct routine safety inspections to ensure staff members are following the City of Orlando Safety Plan. I know this may not be easy for smaller agencies or agencies with limited staff and funding resources. However, I was reminded recently by our Risk Management Division Manager that the money put into safety training, safety technology, and follow-up inspections generally pays for itself and helps minimize loss accrued through worker's comp claims and civil litigation. Just some food for thought!

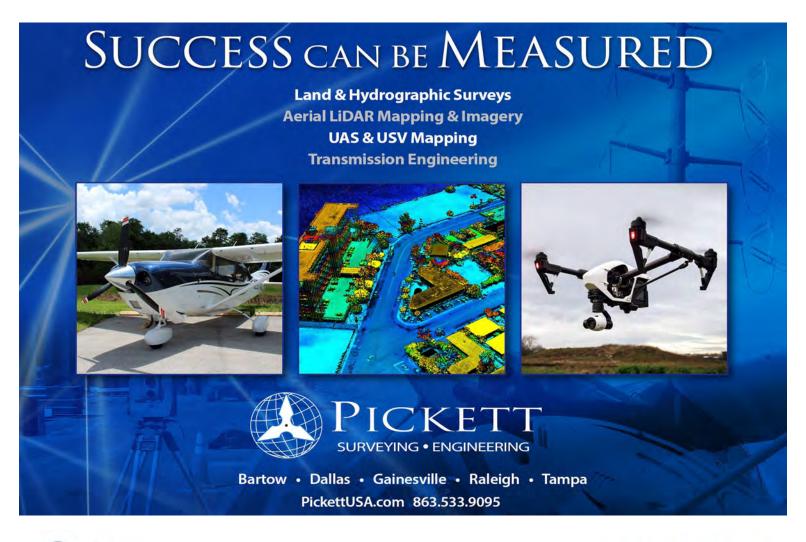

Safety should be everyone's priority. Another area of focus will be the provisions in Florida Statutes Chapter 177 parts I-III. I know I have brought this up in past articles, but there will be movement in the next few months. Initial discussions will begin in the next few weeks. Thanks to Bill Muscatello, the Orange County Surveyor, for getting the ball rolling. We will work with as many government surveyors as we can, and work to involve the private sector as well, so the subdivision process protects the public and does not lead to further confusion or issues. Times have changed and updates are needed, but the parts that work need to be retained. This process needs to be transparent and

"However, I was reminded recently by our Risk Management Division Manager that the money put into safety training, safety technology, and follow-up inspections generally pays for itself and helps minimize loss accrued through worker's comp claims and civil litigation."

careful consideration must be given to any proposed changes.

In the next week or two, I will confirm the contact information of the government surveyors that I have been working with. In establishing correspondence, I hope to have a regular line of communication regarding the process and allow for feedback with the process. I know that not everyone will be happy with every decision made, but through consensus we will hopefully produce something that will be beneficial for all.

The Florida Surveyor 7 April 2019

FSMS Pioneers

A series that honors the legends of surveying in the state of Florida

By Dominic Levings

Edwina "Byni" Polk

With resolve and kindness, Polk overcame barriers as a female surveyor in a different era

In the lobby of the Florida Surveying & Mapping Society office in Tallahassee, just to the left of the doorway, a large picture has hung on the wall since 1998. A wooden frame surrounds a portrait of an elderly woman, looking out from behind giant metal-rimmed glasses. The plaque beneath the picture reads: Edwina "Byni" Polk, Florida's First Lady of Surveying.

Born on January 30th, 1921, in Lakeland, Florida, Byni Polk was a trailblazer for women in the surveying and engineering professions. Sixty-one years ago, in February 1958, she became the first female licensed surveyor in the State of Florida, PLS #1332.

Polk is best known for her 26-year stint with the Polk County Engineering Department from 1963-1989, in which she started as a draftsman, became the de-facto county surveyor, and eventually obtained the title of assistant county engineer.

Polk passed away in August 2002, at 81 years old. She died peacefully in her home in Lakeland, a house that her grandfather built in the 1920s. She lived in the same house her entire life.

She is remembered as an incredibly intelligent woman, who had a gift for mathematics and a straight-shooting personality. Many who knew her say they've never met anyone else like her.

"She was the total package. She was professional. She was the mentor, the teacher. She was brilliant, charming – you can't say enough things about her," said Jack Breed, who worked for Polk in the 1980s.

Choosing A Different Route

Polk attended Florida Southern College and graduated in 1942 with degrees in mathematics and chemistry. She finished college just six months after the United States entered World War II.

She was offered a scholarship to attend graduate school, but she decided to join the war effort instead. Because of her mathematical prowess, both the Army and Navy recruited her. She chose to join the Navy because she would be based in Charleston, South Carolina, which was much closer to home than the Army base in Colorado.

Polk's chief duty was to calibrate guns on American and British battleships. It was during this time that she would first encounter sexism and discrimination in a professional setting.

She once recalled that when she started with the Navy, she was assigned to assist another man, even though they were qualified to do the same exact work. They had the same education, and unsurprisingly, he was paid more.

Some captains did not want her to

The Florida Surveyor 8 April 2019

Byni Polk, circa 1998. This picture is framed in the FSMS office.

board their ships at all. But when they were told by base officers that she was the woman for the job, and that she would make their guns shoot straight, they relented.

"It was one of the things she was admired for. At that time, a woman going on a ship to calibrate a gun... you looked at it askew," said John Clyatt, who also worked with Polk in the 1980s.

After the war, Polk returned to Lakeland and taught high school math for a year. She then held various design and drafting positions, including private sector stints with Lakeland Engineering Associates and IMC-Agrico.

It was during this time that she met her eventual husband, Virgil "Ike" Polk, at Dixieland Baptist Church. He worked for the State Road Department, and they were married in 1949.

It was because of her husband that Byni eventually became a licensed surveyor, but in a rather roundabout way.

The young couple realized that Ike would have to obtain his survey license to further his career. The problem was, he wasn't very good at math. And so, Byni had to teach

him.

"I undertook to teach it to him. I had to learn about surveying. I got interested," Polk said in a 1998 interview. "By the time he was ready for the exam, I could have taken it too."

And in late 1957, Polk would do just that. When she took the survey exam, the men administering the test were surprised to see a woman walk in.

"I was the only woman taking the test," she recalled. "All of the men just stared."

Polk's physical stature surely also played a role in the men's astonishment. She was not only a woman, but an extremely diminutive one.

"She couldn't have weighed 90 pounds sopping wet. She was a little bitty, tiny woman," Breed recalled.

But Larry Sharp, who worked for Ike at the State Road Department, says she was perfectly equipped for that sort of situation.

"They didn't expect to see her. Especially a woman who was smarter at mathematics than they were," Sharp said. "What helped her was ability and personality."

After receiving her license, Polk wasn't just known as Florida's first female land surveyor. Because Ike also had a surveying license, the couple was dubbed "Florida's First Couple of Surveying".

The Polk County Engineering Department

Polk began working for the Polk County Engineering Department in 1963. At first, she designed drainage systems and bridges, and led an effort to catalogue all 4,900 roads in Polk County. In 1976, after being named Assistant County Engineer, she led the production, design, and drafting departments. She also oversaw right-of-way acquisitions and made recommendations regarding road closures to the County Commission.

Former employees and others who worked with Polk say that her malleable personality allowed her to garner respect and lead effectively. She had the ability to be stern and direct, as well as generous and kind. But regardless of which style was being employed, she was always just trying to solve problems.

"She would just talk to you if something was done wrong. She was a person who worked through problems," said Bill Hinkle, who began working with Polk in 1979.

David Rivers, who was a right-ofway agent for the county, remembered that Polk was always one to tell it like it was.

"She was just a splendid woman to work with," Rivers recalled in 1998. "As tiny as she was, she was very potent with words."

Polk, of course, was aware of her reputation that she could occasion-

Polk at the Initial Point Monument in Tallahassee.

The Florida Surveyor 9 April 2019

Polk with former Department of Transportation Secretary Tom Barry.

ally be a "spitfire", as former drainage engineer Joel Johnson put it. She recalled that a co-worker once told someone else that "she might look like somebody's grandmother, but don't let that fool you."

Breed remembers one time when he and Polk were reviewing a mylar he had recently completed.

"Jack, hunny, you've got an error on this plat," Breed remembers Polk as saying.

However, the plat had already been signed and sealed. It was the final document, and the county commissioners had signed it.

This, evidently, didn't deter Polk. She pulled out a pen and fixed the plat, right there.

"She flat out altered a public document because she knew what was right and wrong," Breed said.

As Breed found out, Polk's expan-

sive knowledge and her incredible memory were of legendary status to those who worked with her.

"She knows everything there is to know about this county, and most of it is probably not written down anyplace," said Polk County Attorney Irvin Cowie in 1989.

Polk was a mentor to nearly everyone to worked for her, fostering interest in the profession and using every opportunity to teach. Breed remembers that she genuinely cared about people and wanted to know you.

"She wasn't just a bureaucrat doing her job, she wanted to know who you were, and she paid attention to the people around her," Breed said.

FSMS President Dianne Collins views Polk as a role model in the profession. In 1981, Collins was only the fifth or sixth woman to receive her surveying license in Florida - a full 23 years after Polk

became the first.

Collins, who lives in Lakeland, first met Polk in the early 1970s and formed a working relationship with her over the years. Polk agreed to be a reference for Collins when she applied to take the licensure exam.

"She was easy to work with, respectful, and dedicated to her work at the county," Collins remembers.

However, everyone has their limits, and it seems mentoring was about as far as Polk would go for those she worked with. And John Clyatt knows this firsthand.

Polk contacted Clyatt in 1985 when he was living in Pensacola. She told him that he should come home and take an open surveying position with Pickett & Associates.

Polk was good friends with Clyatt's parents, and Clyatt suspected that his mom asked Polk to contact him about the job, so that he would move back home. Clyatt would eventually agree and moved back home to Bartow.

"I spent quite a bit of time going back and forth to the county, asking her things about county rules and regulations. She was always very gracious and helpful," Clyatt recalled.

Until one day, when Clyatt walked into her office again seeking help. Polk looked up from her desk and didn't hold back.

"John, I'm real glad you're back home, but I didn't take you to raise," Polk said bluntly.

Despite Polk's refusal to "raise" him, Clyatt eventually became the President of Pickett, a feat which was in part possible because of Polk's willingness to contact him.

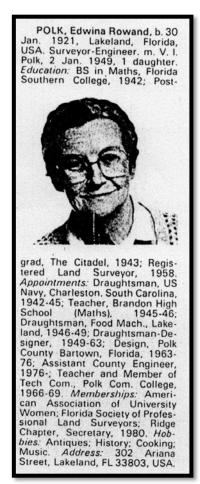

"I've always been very appreciative of her thinking about me and reaching out and getting me to where I was," Clyatt said. Despite her encyclopedic knowledge, her role as a mentor, and her one-of-a-kind personality, Polk is perhaps most remembered for something else during her 26year career with Polk County.

Byni Polk was a prolific baker.

At her baking apex, she baked a cake for every single employee in the engineering department on their birthday, which added up to over 60 cakes per year. She would also bake over 6,000 cookies every year around Christmastime, which were distributed to her employees, her husband's employees at the State Road Department, and other friends and family.

Over her 26-year career, she estimated she baked over 1,000 cakes, and well over 50,000 cookies.

"I was very impressed with what she would do for employees. She baked a cake personally, it wasn't

Polk's bio in the 9th edition of The World Who's Who of Women.

Polk and other FSMS members at the Florida Capitol in Tallahassee.

bought. And sometimes we'd get three cakes in one week," Hinkle recalled.

"It's incredible to take the time to do that. That's what impressed me the most, is that someone took the time to do that for those that worked for them."

Retirement and Recognition

Polk retired from the Polk County Engineering Department in August of 1989, when she was 68 years old. Unsurprisingly, her retirement was followed by a chorus of appraising headlines from local newspapers.

"Human Archive Retires", read a headline in The Tampa Tribune.

"County Worker Leaves Legacy of Knowledge, Cakes" read another headline in Lakeland's newspaper, The Ledger.

In retirement, Polk spent much of her time listening to classical music and studying English history, her two favorite pursuits. She also took care of her family's two Arabian horses and cats.

Ike was diagnosed with bladder cancer in 1977 and battled it periodically until passing away in 1994. They had one daughter, Edith, who was an author. She passed away in 2015,

thirteen years after her mom.

In 1998, 40 years after she became the first registered female land surveyor in Florida, the Ridge Chapter of FSMS decided to formally honor Polk. Hinkle led the recognition efforts along with Sharp, who was the Chapter President at the time.

"We moved along pretty fast with it," Hinkle recalled. "It was pretty exciting to learn her history, to collect all of the stuff written about her."

On January 20th, 1998, the chapter hosted a special ceremony for Polk at the Huntington Hills Country Club in Lakeland. The night was billed as "A Tribute to Florida's First Lady of Surveying."

The evening featured a social hour, a seated dinner, and a program that included several speakers. The Polk County Commission also declared January 20th as a day in her honor.

In the run-up to the ceremony, the local Fox News station interviewed Polk in her home for a Fox Network series titled "Fox Folks". The segment aired across the Tampa Bay area and was eventually syndicated across the country.

In early March 1998, thanks to further efforts by the Ridge Chapter,

Polk with the Florida Cabinet. Governor Lawton Chiles is handing her the resolution.

Polk traveled to Tallahassee to be honored again. On March 9th, her portrait and a scholarship were dedicated in her name at the FSMS Administrative Office.

The next day, she was honored by the State Legislature at the Capitol. In the Florida Cabinet meeting room, Polk was presented with a special resolution recognizing her as Florida's First Lady of Surveying. The resolution was presented by Governor Lawton Chiles and the rest of the Florida Cabinet.

Remembering Byni

At the end of her career and her life, Polk suffered from severe arthritis in her hands, which left them misshapen. But she didn't let it slow her down.

"She had crippling arthritis in her hands, yet she persevered and still

had meticulous handwriting," Clyatt recalled.

The pain was so debilitating that when baking cakes, she had to use a nut-cracker with both hands just to turn the knob on her stove clock.

In many ways, this gritty determination illustrates why Byni Polk found herself being honored by the Florida State Legislature in March of 1998.

"She had gumption. She didn't give up. She was a very nice person and that was a big factor in making her very successful, because people very quickly respected her," Sharp said.

Breed identifies one personality trait in particular when speaking about the obstacles Polk had to overcome early on in her career.

"She overcame them all with grace," Breed said. "She was just a graceful lady."

Her grace and tenacity allowed her to forge ahead as a woman in a man's field, carving out a path for future female surveyors and engineers. She simply wouldn't accept a lesser role just because she was a woman.

"I had one boss who told me I was the best in the office, but that I wouldn't go any higher because I was a woman," Polk said in 1989. "I quit."

Her trailblazing career even landed her a spot in the 1985 edition of "The World Who's Who of Women" encyclopedia.

But Polk often downplayed her role as a woman pioneer, never wanting to bask in the spotlight of her accomplishments.

"I haven't done anything women don't do now," Polk stated in 1989. "I just did it earlier. As my daughter says, I was a woman's libber before there was such a thing."

Regardless of her reluctance to be acknowledged as an icon in the profession, those who knew Byni Polk will always know differently.

"She was good to work for and always fair," Hinkle recalled.

"She was a good lady, definitely. A great lady, I would say."

And it's certainly hard to argue with that.

Sources listed on page 34.

The Ridge Chapter hosted "A Tribute To Florida's First Lady of Surveying" on January 20th, 1998.

National Surveyors Week

March 17-23, 2019

WHEREAS, surveyors and mappers are counted among the founding leaders of our country and were instrumental in the formation of the layout of property boundaries in the United States which have provided our citizens the enjoyment of property ownership; and

WHEREAS, George Washington, Thomas Jefferson and other former Presidents of the United States, served their fellow colonists as surveyors; and

WHEREAS, the citizens of Florida recognize the valuable contributions of the surveying and mapping profession to history, development, and quality of life in Florida and the United States of America and make important decisions based on the knowledge and expertise of licensed surveyors and mappers; and

WHEREAS, the surveying and mapping profession requires special education, training, the knowledge of mathematics, the related physical and applied sciences, and requirements of law for evidence; and

WHEREAS, surveyors and mappers are uniquely qualified and licensed to determine and describe land and water boundaries for the management of natural resources and protection of private and public property rights; and

WHEREAS, the continual advancements in instrumentation have required the surveyor and mapper not only to be able to understand and implement the methods of the past, but also to learn and employ modern technology in finding solutions to meet the challenges of the future.

NOW, THEREFORE, BE IT RESOLVED that in conjunction with National Surveyors Week, the Governor and Cabinet of the State of Florida do hereby proclaim the week of March 17-23, 2019, as

FLORIDA SURVEYORS & MAPPERS WEEK

and recognize the many contributions and the ongoing dedication of surveyors and mappers to the citizens of Florida and the United States.

IN TESTIMONY WHEREOF the Governor and the Cabinet of the State of Florida have hereunto subscribed their names and have caused the Official Seal of the State of Florida to be hereunto affixed in the City of Tallahassee on this 12th day of March, 2019

The Florida Surveyor 19 April 2019

Why do we call an aquatic creature with body of a female and tail of a fish a "mermaid?"

The word "mermaid" is simply a compound of the Old English mere (sea), and maid (a girl or young woman). The male equivalent of the "mermaid" is the merman, also a familiar figure in folklore and heraldry. Although traditions about and sightings of mermen are less common than those of "mermaids, they are generally assumed to co-exist with their female counterparts. The first known "mermaid" stories appeared in Assyria c. 1000 BC. The goddess Atargatis, mother of Assyrian queen Semiramis, loved a mortal (a shepherd) and unintentionally killed him. Ashamed, she jumped into a lake and took the form of a fish, but the waters would not conceal her divine beauty. Thereafter, she took the form of a "mermaid", human above the waist, fish below.

Why when we overindulge someone are we said to "spoil" them??

"Spoil" comes from the Latin word *spoilum* which originally meant the skin that had been taken from a dead animal. From that, the French used "spoil" as a verb meaning to strip the armor and weapons from a slain enemy. From that we get "spoils", to describe the items removed or plundered from battles as in the "spoils of war." The verb could also be used at one time for seizing goods by violence. From there "spoil" took on the meaning of depriving someone of some quality or distinction, and later still to impair or damage something to the extent that it became useless. By the end of the seventeenth century, this had reached the point where to spoil could mean "to injure in respect of character, especially by over-indulgence or undue lenience" and also "to become unfit for use."

Why do we use "pretty" such as the conference is "pretty soon?"

The word "pretty" is very, very old (like medieval old) and has taken some drastic changes since its inception. "Pretty" first appears in Old English (around 1000 years ago) as "praettig," meaning "cunning or crafty," a modification of the word "praett", meaning "trick." From the 1400s onward, "pretty" acquired more and more definitions, from "clever" or "skillful" to "elegantly made or done" (like a pretty speech). Quickly, this positive connotation comes to describe things, places, and people. Shakespeare was a big fan of the word "pretty" in general and used it well over 100 times in his writing, taking advantage of almost every one of its potential meanings from "clever" to "proper" to "good" to "considerable" to "childish or trifling" to "attractive." As a compliment specifically, "pretty" weakened over its centuries of use. In fact, as early as the 1500s, there was "an implicit distinction in usage between "pretty" and 'beautiful,' and "pretty" was often used in a patronizing or even depreciative sense, still very much in use today. In this sense "pretty" was applied, in rather a condescending way, to young women as a reduced version of beautiful. Words like "pretty", fairly, really, very, and quite are placed directly in front of adjectives or adverbs to add to their meaning. Often they make the meaning of the adverb or adjective stronger, or more intense. For this reason, these words are called intensifiers. However, some intensifiers weaken the meaning of the adjective or adverb that they modify. Really and very are strong. When one of these words is placed in front of an adjective or adverb, it makes the meaning of that adjective or adverb more intense, (She did very well on a test, or the water is really cold). Fairly and "pretty" weaken the adverbs or adjectives that they modify. They tell you that the quality described by the adverb or adjective is present, but only to a limited extent. So I'll end with that since this has gotten "pretty" long.

Quick Facts:

- ⇒The "wasabi" you get in Asian restaurants isn't really wasabi. Outside Japan, it is rare to find real wasabi plants. Due to its high cost, a common substitute is a mixture of horseradish, mustard, starch, and green food coloring or spinach powder
- ⇒ Nintendo was founded in 1889. No, that's not a typo. The beloved Japanese gaming company is about 100 years older than you probably thought. Decades before Pokémon and Mario, Nintendo started out as a card game company. They slowly branched out into other forms of gaming over the years.

- ⇒The last person executed by guillotine in France was Hamida Djandoubi, on September 10, 1977. He was the last person to be legally executed by beheading in the Western world and the last person to be legally executed in the European Union.
- ⇒Wojtek, a Syrian brown bear, was promoted to the rank of corporal during World War II. Wojtek, dubbed the Soldier Bear, was bought from a young boy by a member of the Polish army. In order to provide for his rations and transportation, he was enlisted officially as a soldier with the rank of private. During the Battle of Monte Cassino, when Wojtek's unit needed ammunition, he helped by carrying 100-pound crates of 25-pound artillery shells, all without dropping a single one. The bear mimicked the soldiers: when he saw the other soldiers lifting crates, he copied them. The boxes he carried normally required 4 men. Following the battle, he was promoted to the rank of corporal. And after the Allies won World War II, he moved to Britain and lived in the Edinburgh Zoo until his death in 1963.

⇒One 18-inch pizza is more pizza than two 12-inch pizzas. Let's do some math. If a pizza has a diameter of 18 inches, that means it has an area of 254.47 square inches. And if a pizza has a diameter of 12 inches, then it has an area of 113.1 square inches. If you get two of them, you're at 226.2 square inches, which is still less than one 18-inch pizza.

⇒There are more trees on earth than there are stars in the galaxy. The number of trees on Earth is mindboggling. NASA estimates that there are between 100 billion and 400 billion stars in the Milky Way galaxy. And according to a paper in Nature, there are more than 3 trillion trees on Earth.

- ⇒While Harvard is the oldest continuously operating university in the United States, it isn't even close to being the oldest one in the world. That would be the University of Al Quaraouiyine in Fez, Morocco, established in 859.
- ⇒More people live in Bangladesh than in Russia. Don't let size fool you here. Although Bangladesh is smaller than Russia, its population is 163 million people. The population of Russia is 144.3 million.
- ⇒In a room of 23 people, there's a better-than-50% chance that two people have the same birthday. It's called the Birthday Paradox.
- ⇒A Banyan Tree near Kolkata, India is bigger than the average Walmart. The average Walmart store covers about 104,000 square feet. The Great Banyan Tree in Kolkata, India is about the size of a forest, covering 155,000 square feet.
- ⇒Baby carrots are not actually baby carrots. In case you didn't know, they're just chopped up normal carrots. Farmer Mike Yurosek invented them in 1986 as a way to use misshapen carrots that weren't sold in stores. He put them in bags, and sold them in supermarkets. By the early 1990s, they became the phenomenon they are now.

⇒A day on Venus is longer than a year on Venus. To puzzle this out, remember that one day is how long it takes for a planet to rotate on its own axis, and one year is how long it takes for a planet to rotate around the sun. Venus takes about 243 Earth Days to spin around just once (and in the opposite direction as the Earth, by the way) and 225 Earth Days to go around the sun. So a day is longer than a year.

Around the State

Tom Steckler (left) and Dominic Levings (right) with Jack Breed at the Island Wing Factory in Tallahassee. Breed was in town with the UF students.

Steckler speaking at the Manasota, Charlotte Harbor, and Collier-Lee Tri-Chapter meeting.

Steckler received a "standing ovation" before speaking at the Palm Beach, Broward, and Miami-Dade Tri-Chapter meeting.

The Florida Surveyor is the official publication of the Florida Surveying and Mapping Society, Inc. (FSMS). It is published monthly for the purpose of communicating with the professional surveying community and related professions who are members of FSMS. Our award winning publication informs members eleven months of the year of national, state, and district events and accomplishments as well as articles relevant to the surveying profession. The latest educational offerings are also included.

Advertise With Us!

All advertisements contained within the publication are published as a service to readers. Publication of the advertisements does not imply or express any endorsement or recommendation by FSMS. The rates are as follows:

Size	1 Issue	2-11 Issues
Inside Front Cover	n/a	\$525/issue
Inside Back Cover	n/a	\$525/issue
Full Page	\$720	\$395/issue
1/2 Page	\$575	\$320/issue
1/4 Page	\$290	\$175/issue
Business Card	\$120	\$100/issue

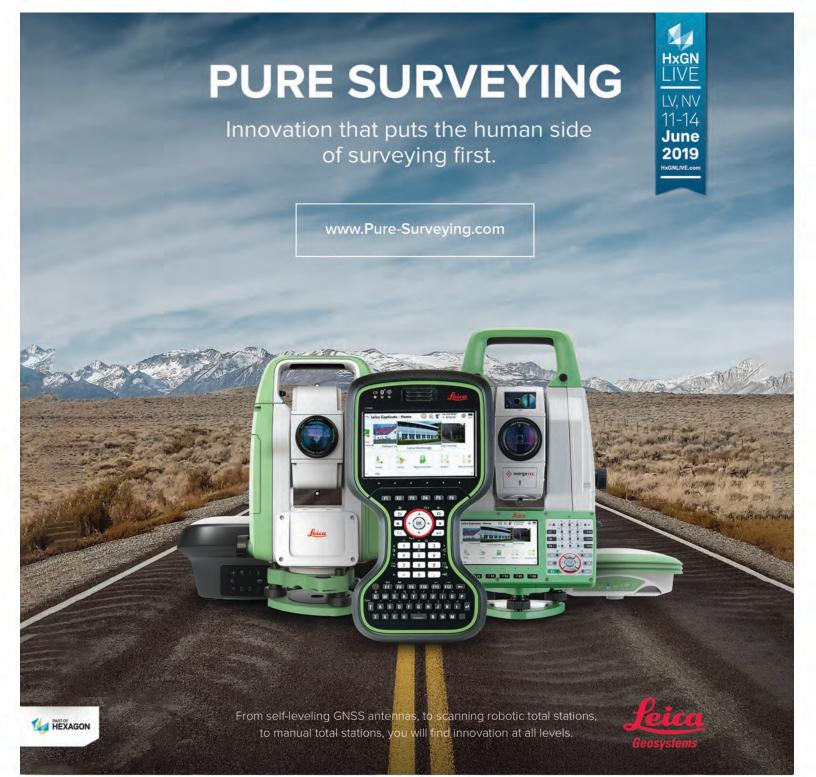

Requirements: Prices listed above do not include 7.5% sales tax; contracts for one year (11 issues) receive 10% discount if paid in advance; camera-ready copy (JPEG, PDF, GIF, PNG documents); new ads and/or changes are due by the 15th of each month for the following month's publication. It is the responsibility of the client to submit new ads or changes. If not received by the 15th of the month no ad change will occur for one month.

Benefits: Full color; hotlinks to your website added to your ad.
